FALL BULLETIN — OF — THE VAN DUSEN NURSERIES GENEVA, N. Y.

W. L. McKAY, Proprietor

LIBRARY
RECEIVED
★ SEP 25 1924
U. S. Department of Agriculture

SHOWING OUR CORDON STANDARD APPLE TREES, WITH DWARF APPLE TREES PLANTED BETWEEN. See page 5.

WE HOPE to have our new General Catalogue out early in January, and until it is ready, we cannot supply a General Catalogue as our last edition is exhausted. We can, however, supply our Dwarf Fruit Tree Bulletin of last March which covers the ground very fully for the Dwarf Trees.

We are mailing this Fall Bulletin to our entire mailing list, but before mailing our new Catalogue we shall revise our present mailing list and mail our Catalogue only (1) to those who have ordered from us during the past three or four seasons; and (2) to those who have answered our advertisements or corresponded with us within the past year. All other names on our old lists will be dropped **except such as write us requesting to be retained on our mailing list.** We shall be glad to retain all who take interest enough in our publications to ask for them, whether they are buyers or not.

We shall try to make our 1915 catalogue the best we have ever issued, and expect to go more into cultural directions and a general discussion of matters of interest to the fruit grower than formerly, probably expanding it from a 32-page publication to one from 48 to 64 pages as may seem needed to cover the ground as we wish.

CONTENTS

- Page 2. General selling methods and terms; prepayment of transportation; **what to plant in the fall.**
3. What to plant in the fall; Dwarf Fruit Trees.
 4. Dwarf Fruit Trees.
 5. Cordon Standard Apples; standard fruit trees.
 6. Standard fruit trees.

- Page 7. List of plants by Parcel Post.
8. Bargains in Apple and Plum trees; Ornamental Department; Fresh Fruit prices for Fresh Fruit direct from our own orchards.

Don't overlook our offer on page 8 to ship apples and pears from our orchard direct to you; you buy at about half your usual price.

OUR GUARANTY—SUBSTITUTIONS—We take a different position with respect to orders evidently intended for commercial orchard planting, and those evidently intended for home use only.

Orders for Commercial Orchard—In respect to such orders we guarantee our customers against wilful or intentional change of labels, and will exercise the greatest care to have every variety exactly what it purports to be. In case of any error we will replace with other stock or refund the purchase price as preferred. On such orders if you desire substitutions made in case we are out of a variety ordered, please state this wish when you place your order, otherwise we shall omit such varieties and refund the money for them.

Orders for Home Use—On these orders, showing from the number of each variety ordered that they cannot be intended for commercial orchard, we shall, if out of a variety ordered, send some other variety in its place, **CORRECTLY LABELLED**. We shall send a variety as nearly like the one ordered as we have, and no low priced variety will be sent for a higher priced one without refunding the difference in cost. This will be our general rule; now, if you desire no changes whatever in your order, state the fact and no changes will be made, and the money will be refunded for any varieties that we cannot furnish.

If your order is for fruit trees, we shall construe an order for ten or more trees of a variety as being intended for commercial planting, such a 10 McIntosh, but not 10 apple trees made up of several varieties. In small fruits, however, there may be room for doubt, and therefore we would much prefer that you indicate your wishes about each variety when ordering.

CASH WITH ORDER—We shall decline to fill orders not paid for before shipment. That we ask for cash is no reflection on the credit of our customers, but is an absolute necessity to success in a mail order business where thousands of orders are handled, the average amount of which is a very few dollars each. Neither do we ship C. O. D. This is both more expensive for the buyer, and makes more trouble in shipping when our whole force is very busy.

MANNER OF REMITTING—Any way most convenient to you—postal or express order, or your own personal check. Do not send cash in a letter without registering.

WE PREPAY ALL TRANSPORTATION CHARGES—Practically all seedlings on which we bud for dwarf trees and quinces, come from England and France, and from the latter country all seedlings on which we bud standard Pears, Plums and Cherries, and a large part of our apple seedlings. Conditions in Europe at time of writing this make it exceedingly doubtful if the nurserymen here will be able to get any of these foreign budding stocks this year, and in dwarfs especially there must be a slight advance in the price on some kinds of trees. For this fall we shall retain our former prices on all standard trees and on dwarf peach trees. We have decided, however, for this fall, as a special inducement to our customers to give us their orders now instead of waiting for spring, to prepay all transportation charges on fall shipments amounting to \$7.50 or over, at list prices, which are received by October 15th, accompanied by cash for same. We make the further offer on orders under \$7.50 by Oct. 15th and accompanied by cash, to prepay all charges for the additional payment by you of 25c for each order. This is less than the average cost of charges on such orders, and the offer is made so all our customers may share in the saving to them in proportion somewhat to the amount of their orders.

Fall planted Montmorency after first season's growth.

When planted it was a one-year whip, similar to the one Mr. McKay is holding.

See cut page 3, two years later.

On the items offered by Parcel Post on page 7, this charge of 25c does not apply. The manner of shipment, freight express or mail will be at our option, but in all instances the safety of the stock will be considered.

FUMIGATION AND INSPECTION—All our stock is fumigated with hydrocyanic acid gas for any injurious insect life, and all shipments are made under our Certificate of Inspection given by the Commissioner of Agriculture of the State of New York.

ORDER EARLY—and take advantage of our **FREE DELIVERY**, also remembering that instead of having fully three months in which to ship as in the spring, we are limited in the fall to about six weeks during which shipments may be made. Remember too, that **Late October and Early November** are the best times for fall planting.

WHAT TO PLANT IN THE FALL

The object of this Bulletin is to sell trees to be planted this fall; selling literature, however, which does not consider the buyers interest as well as the sellers is entitled to little consideration, and I shall urge the fall planting of nothing unless from my own experience as an orchardist, I am able to say that such and such kinds of trees and plants do as well or better, planted in the fall as in the spring.

It is only in these two seasons that trees may safely be dug, shipped and replanted—in the spring before the season's growth has started and while the tree is still dormant, and in the fall after the season's growth is completed and the tree has become dormant again. The former period extends from late winter or early spring till well along into May—the **earlier the better, however**—the latter period from the latter part of October till it freezes up, late October and early November being the best.

If a tree does equally well planted at either time then the fall is far the better time for two reasons; first, most men who plant trees have far more time at their disposal in the fall than in the spring, when not only tree planting but everything else needs doing all at once, and second, a tree well planted in the fall is at least a good half season's growth ahead of the average spring planted tree at the end of its first season. If you dig an October planted tree about a month after planting, you will find on many of them little thread-like rootlets perhaps an inch long, showing that the tree has started. Whether these rootlets show or not, however, the tree is planted, well settled and really started the fall before, and is all ready to respond to

that first call of spring that birds and plants recognize so unerringly. It is this early growth that counts so much in the total amount that the tree makes its first season. It is impossible for the nurseryman to get the trees to you early enough so you can plant them in time to give them this early start. Even if the trees could be gotten early enough, there is always delay in fitting the land for them owing to wet weather, and usually it is some time in May before your trees are really planted.

The kinds of trees that may best be planted in the fall, depends not only on the matter of hardiness but on how early in the spring a plant naturally starts its growth. Obviously, those which naturally start very early are far better planted in the fall if hardy enough to stand the winter after the shock of transplanting. In this class are Gooseberries, Currants, Asparagus, Rhubarb, and among the trees, the Cherry, for all of which I much prefer fall planting, except that for climates as cold as Geneva, it is a little questionable whether the sweet varieties of Cherries had not best be left till spring. For our climate here, practically all the ordinary varieties of Apples, Pears, Plums and Sour Cherries are entirely successful planted in the fall. It is generally thought by most orchardists here that Sweet Cherries, Peaches, Apricots and Quinces do better when spring planted, and without doubt in our own and colder climates if planted in quantity they had best be left till spring. I would not hesitate, however, to plant a few in the fall if I were planting other trees and wished to add them to my planting.

Possibly instances from my own experience may be interesting; last fall in early December, we planted 468 peach trees, smallest size. It was the worst winter I have known for fall planted stock in Geneva in over 30 years. Our losses were a little less than 10%. I, myself, shall not hesitate again to plant peach trees in the fall, though the general opinion among orchardists is against it.

In the fall of 1911 we planted 1550 one year old Montmorency cherry trees, during the week of October 23d. The following June I counted 1550 live trees—a 100% planting. This planting has been so successful that I show two photographs, one on page 2 taken in the fall of 1912 showing about the tree that was planted and about the one season's growth, and the other on page 3 taken in July of the present year, before the orchard had completed its third season's growth. This season this orchard picked several hundred pounds of fruit. I believe this orchard is fully one entire season growth ahead of where it would be had it been planted the following spring.

On thanksgiving day of 1910 we completed a planting of over six thousand Downing and Pearl Gooseberries—nearly four acres. The following spring neither my foreman nor myself noticed a single missing plant, although we did not give the same examination as in the case of the Montmorency orchard. It was practically, however, a perfect stand, and during the last three of its four seasons, has picked 33,300 lbs. of fruit.

In the fall of 1887 and spring of 1888 I planted an orchard of thirty-five hundred plum trees; those planted in the fall showed far better than the spring planting, both in thrift and in fewer losses. In both apples and pears my experience has been the same, and in planting the red varieties of Raspberries my fall plantings have always been remarkably successful—far better than when planted in the spring.

In addition to kinds already mentioned I would recommend the Grapes, Blackberries, Carolina Poplar, and, in fact, nearly all the hardy ornamental trees and woody shrubs. Clematis, Evergreens, roses and any soft-wooded or herbaceous shrubs I would by all means leave till spring. It must of course be remembered that in colder climates the kinds that may be safely planted in the fall may become fewer, while southward in most parts of Pennsylvania and in New Jersey, almost all kinds of stock may be safely planted in the fall.

Row of fall planted Montmorency, taken in July of their third season's growth. See cut page 2.

THIS BOOKLET does not claim to be a catalogue, as space does not allow of descriptions of fruit or much other matter of information which will go into our General Catalogue which will be issued early next winter. As our last edition is exhausted, we cannot therefore send out any full catalogue for several months, but any information desired before it is out, will be gladly furnished by letter so far as in our power.

DWARF FRUIT TREES

We give these first place in this Bulletin, as we regard our trade with those who buy for the home garden as the most important branch of our business, and for this purpose we believe the Dwarf Fruit Trees are entitled to the first consideration, and are better adapted for this purpose than the standards.

The entire subject of Dwarf Fruit Trees, their different forms and methods of planting and pruning is so fully covered in our Bulletin of last March on "Dwarf Fruit Trees," that we shall do little more here than give prices and lists of varieties that we shall have to furnish this fall and next spring.

The March Bulletin has been sent to all who receive this who have formerly corresponded with us, and will accompany this to all new correspondents for their information on the subject beyond what this will give. Of course the varieties and prices given in this Bulletin supersede all varieties and prices in the March Bulletin, where they may differ. Any former correspondent desiring another copy of our March Bulletin will receive it on request.

THE BUSH OR "VASE" FORM shown on page 4 of the March Bulletin is the most practical for the easy handling of Dwarf Trees. Most of the trees we ship have already been started for this form; it is the simplest of any and will probably give the largest returns in fruit, and just as quickly. They admit of very close pruning and correspondingly close planting, or may be allowed to grow more liberally at greater distances. According to your manner of pruning I should say that from six to twelve feet apart each way would be about the limits to observe. Even at the greater distance Dwarfs should be kept well pruned.

CORDON STANDARD APPLE TREES

See cut on front cover page

So far as we know an entirely new method of growing apple trees in this country, but copied after the English who simply designate them as "Standards". As the use of this term however would lead to confusion from our designating our usual form of trees standards, we take the liberty of designating them as "Cordon Standards."

We have taken our extra strong one year old trees and instead of heading them off at about 30 inches to form the head, we have headed them at about 5 feet in height, and allowed them to form a very high head and have kept it nearly globular in form by keeping the new growth pinched back so as to stimulate the formation of fruit buds. All trees offered under this head have been pinched back the past summer three or four times. If this pinching back is continued they may be forced into bearing nearly as quickly as dwarf trees. They will be found very ornamental when planted along the roadside or driveways, or as borders of large lawns or fields. These trees planted alternately with dwarfs would give a very pleasing effect. Be sure in ordering to designate them as "Cordon Standards". Sell only the varieties listed here.

Price, 50c each, \$5.50 per doz.

PARCEL POST PAGE

EVERYTHING ON THIS PAGE GOES POST PAID RIGHT TO YOUR DOOR

Customers are sometimes deterred from ordering small amounts of trees and plants owing to the very large proportional cost of shipping such small quantities. We have had orders for a single June Raspberry plant, and it would seem rather high to pay 25c expressage on it. We therefore will send all stock listed on this page by parcel post, prepaid, unless the party ordering has other stock coming by express or freight, in which case we should send this with the larger package as it is a general rule that **the larger the package the better stock carries**. They pack closer, dry out less easily, and can be given more moisture to start with than would be allowed in a mail package. At our option we may send by prepaid freight or express.

RED AND YELLOW RASPBERRIES

Cuthbert and Marlboro, (early) 25c for 6; 50c for 12; 75c for 25; \$1.25 for 50; \$2.25 for 100.

Herbert and Golden Queen, (yellow), 50c for 6; \$1.00 for 12; \$1.50 for 25; \$2.50 for 50; \$4.25 for 100.

June, (very early) 25c each; 50c for 3, 75c for 6; \$1.25 for 12; \$2.25 for 25; \$4.00 for 50; \$7.50 for 100.

St. Regis, (everbearing July to October), 25c each; 50c for 3; 75c for 6; \$1.25 for 12; \$2.00 for 25; \$3.50 for 50; \$6.00 for 100.

These two berries are of the greatest interest, and are the cheapest berries listed in proportion to their values—June for its enormous size and productiveness, and St. Regis for its perpetual bearing qualities of nearly four months. I have always been a Cuthbert man but I believe that June is today the most valuable commercial variety of Red Raspberry on the market. June will outyield it from two to four times, is much larger, fully as firm and good color and nearly or quite as good in quality. If interested in these two kinds send for full page circulars with cuts.

Special for June and St. Regis: 6 each for \$1.25; 12 each for \$2.00.

BLACKBERRIES

Ancient Brittain, Snyder, Taylor, 30c for 6; 60c for 12; \$1.00 for 25; \$1.75 for 50; \$3.00 for 100.

Blowers, 50c for 6; \$1.00 for 12; \$1.50 for 25; \$2.50 for 50; \$4.25 for 100.

This is a new variety of very long season, lasting till other varieties are about all gone. We have fruited them for the first time this year and they seem to me to be the largest of all our varieties, and the fruit is soft, luscious and free from the hard, sour, seedy character of a great many blackberries. I have not seen enough of it yet to say as to its bearing qualities, but the originator claims it is exceedingly productive and I have seen nothing to indicate the contrary. Whether it is or not it has been good enough this year to highly recommend it.

CURRENTS

Cherry, Fay, Wilder and White Grape, 15c each, 40c for 3, 75c for 6, \$1.25 for 12, \$2.25 for 25, \$4.00 for 50, \$7.50 for 100.

Perfection, New, 25c each, \$3.00 per doz.

GOOSEBERRIES

Downing, Houghton, (red) Pearl and Smith's Improved, 20c each, 50c for 3, 90c for 6, \$1.75 for 12, \$3.25 for 25, \$6.00 for 50, \$11.00 for 100.

Industry and Red Jacket, both very large, red varieties, 25c each, \$3.00 per dozen.

GRAPE VINES

Black Varieties: Campbell Early, 30c; Concord, 15c; Moore Early, 20c; Worden, 20c.

Red Varieties: Agawam, 20c; Brighton, 20c; Catawba, 20c; Delaware, 20c.

White Varieties: Diamond, 20c; Empire State, 20c; Niagara, 20c; Winchell, 30c.

Our "LAKESIDE COLLECTION" consists of one each of above twelve varieties, for only \$1.75. They cover the season from very earliest to very latest and are all standard, good yielding varieties, easy to grow.

Our "ARBOR COLLECTION" consists of one each of Catawba, Campbell, Delaware, Niagara, Moore Early, and Winchell, listing at \$1.40, for only \$1.10.

Our "DESSERT COLLECTION" is small, but every bit high quality; Campbell, Delaware and Winchell for 50c.

McKay's Mammoth Rhubarb—A very strong growing, tender, delicious variety which with us, under forced conditions has made a growth of four inches a day. Try it; Knock out both heads from any old barrel, place it over a plant, and watch it grow! 25c each, \$2.50 per doz.

McKay's Giant Asparagus, 50c for 25, 75c for 50, \$1.00 for 75, \$1.25 for 100.

BEURRE BOSC PEAR TREES. about 2 ft., 25c each regardless of number.

Tom Thumb Collection—One each of Dwarf McIntosh Apple, Dwarf Bartlett Pear, Dwarf Montmorency Cherry and Dwarf German Prune Plum for only \$2.00 post paid.

McKay's Giant Asparagus

McKay's Mammoth Rhubarb

A BARGAIN OR TWO, FOR ME AND YOU!

We've got a little patch of ground right near one of our barns that we must clear for a special purpose about October first. There are some elegant apple and plum trees, only a few hundred, growing on it, and rather than throw them away some one is going to get a bargain on them. They are our strictly extra grade, such as we list here at 30c and 35c each, respectively. It is too early to take them out for spring hence they must go this fall. For every dollar you send us you get six of these trees, our selection of varieties. We will follow your wishes as to whether they are apples or plums, or part of each as you wish, and every tree we send will be a good, well recognized variety, suitable for home use. In this offer we call your attention to the fact that not being sold at our list rates they do not come under our offer to pay transportation, although if you order \$7.50 worth of them by Oct. 15th, we will ship them by freight, prepaid. Among the varieties I mention Burbank, Fellenburg, German Prune, Lombard, Monarch, Reine Claude, Shropshire, Yellow Egg, and in apples Ben Davis, Bismarck, Constantine, Gano, McIntosh, Northern Spy, Pewaukee, Seek, Scarlet Beauty, Spitzenburg, Stayman, Stearns, Yellow Transparent, possibly some other kinds. If enough of these are wanted at this price to make up commercial plantings, I will arrange varieties as desired, but for just a few the selection must remain entirely with us.

Fameuse

Baldwin

R. I. Greening

Northern Spy

FRUIT DIRECT FROM GROWER TO CONSUMER.

We have a crop of very fine **Baldwin**, **Fameuse** (Snow), **Greening** and **Spy** Apples, which we will sell for **\$3.00 per barrel** by freight, or by express in the round, so-called **bushel baskets** for **\$1.00**, or the round so-called **half bushel baskets** for **60c**, all shipments f. o. b. Geneva, N. Y. Can commence shipping the latter part of October or early November. Barrel shipments so late as to be in danger of freezing should go by express.

This is all sprayed fruit, strictly No. 1, the same all through the barrel except the face, and free from worms unless an infested apple may pass the grader by chance.

The fruit will be of the following minimum sizes, and from that size upward, including all the larger sized fruit: Fameuse, 2 inches; Baldwin, 2¼ inches; Greening and Spy, 2½ inches.

KIEFFER PEARS—Ready early in October. A rather poor eating pear, but one of the very best canners; by express in the **half bushel basket**, **\$1.00** per basket for fruit 2½ inches and upward in size, **75c** for 2 to 2½ inches and **50c** for a grade just under 2 inches. All strictly No. 1, clean and free from worms.

In the **bushel basket** the prices for these three sizes will be **\$1.50**, **\$1.15** and **75c** respectively. **NO FRUIT WILL BE SHIPPED UNLESS CASH ACCOMPANIES ORDER.**
